DIGITAL LITERACY PROJECT

2025- 2026

NAME- KAASHSIH ADLAK

REG NO. – 25MIB10007

YEAR – 1ST YEAR

BRANCH – INTEGRATED MTECH BIOINFORMATICS AND AI

COURSE CODE – CSE0001

INTRODUCTION

This Digital Literacy Project helped me understand the importance of using digital tools in a safe and effective way. Through different tasks, I explored various platforms like GitHub, LinkedIn, and HackerRank, which are useful for learning, sharing work, and building a professional profile. I also created an infographic to present information creatively and learned how to design content in a simple and clear manner.

In addition, I practiced writing professional emails and understood how proper communication plays an important role in academics and future careers. The project also introduced me to cyber safety through a case study on UPI fraud, which made me more aware of online risks and how to avoid them.

Overall, this project improved my technical skills, communication abilities, and awareness about responsible digital behavior, which will be helpful in my academic and professional journey.

TASK-1

Task 1 involved creating an infographic to spread awareness about digital literacy. I designed a visually clear and simple poster that included important topics such as safe internet practices, commonly used digital tools, and tips for maintaining a professional online presence. The aim was to present useful information in a way that is easy to understand, especially for students who are new to digital platforms. For designing the infographic, I used Canva, which helped me choose a suitable layout, colors, icons, and fonts to make the content more engaging and attractive.

While working on this task, I realized that presenting information visually is very different from writing long text. I had to focus on keeping the content short, clear, and meaningful.

This improved my ability to organize ideas and highlight key points effectively. I also learned how design elements like spacing, color combinations, and icons can make a big difference in how information is understood.

Overall, this task enhanced my creativity and helped me understand the importance of clear communication in the digital world. It also made me more confident in creating content that is both informative and visually appealing.

TASK-2

Task 2 focused on setting up my digital portfolio by creating profiles on platforms like GitHub, LinkedIn, and Kaggle. Each platform serves a different purpose and helps in building a strong online presence. GitHub is mainly used for sharing projects and learning collaboration, LinkedIn helps in connecting with professionals and showcasing achievements, and Kaggle provides opportunities to explore data science and improve analytical skills.

While creating these profiles, I learned how important it is to maintain a professional identity online. I added basic details such as my education and interests to make my profiles complete and presentable. This task helped me understand how these platforms can be useful not only during college but also in future career opportunities.

In the future, I plan to regularly update my GitHub with new projects and practice coding consistently. I also aim to build connections on LinkedIn and stay updated with industry trends. On Kaggle, I hope to explore datasets and improve my problem-solving skills.

Overall, this task gave me a clear idea of how to build and maintain a strong digital presence.

TASK-3

Task 3 focused on exploring practical digital tools by working on a coding platform and

creating an interactive quiz. I used HackerRank to practice coding and solved a beginner level problem, which helped me understand how coding platforms work. It gave me hands-on experience in writing, running, and submitting code, and improved my basic problem-solving skills.

Along with coding, I created a digital literacy quiz using Google Forms. The form included multiple-choice and short-answer questions based on topics like online safety, strong passwords, and responsible internet usage. This activity helped me learn how to design questions, structure a form, and collect responses efficiently. I also explored how responses are automatically stored and organized, which made me understand basic data handling.

Through this task, I not only practiced coding but also learned how digital tools can be used for creating and sharing knowledge. It made me more confident in using platforms for both technical practice and interactive learning. Overall, Task 3 helped me improve my practical skills and understand the usefulness of digital platforms in education and everyday activities.

TASK-4

Task 4 focused on understanding professional communication in digital platforms. I worked on real-life communication scenarios by writing formal emails, such as requesting an assignment extension and applying for an internship. This helped me learn the correct structure of an email, including subject line, greeting, body, and closing. I also created a social media checklist to understand responsible online behavior and the importance of maintaining a positive digital presence.

Through this task, I realized how small details like tone, clarity, and politeness can make a big difference in communication. Poorly written messages can create confusion or leave a negative impression, while well-structured communication reflects professionalism. I also learned the importance of being careful about what we share online.

Overall, this task improved my communication skills and made me more aware of proper

digital etiquette, which will be useful in both academic and professional situations.

TASK-5

Task 5 focused on cybercrime awareness through a case study on UPI fraud and a prevention checklist. While working on this task, I was surprised to see how easily people can be tricked by simple messages or fake links. Many scams look very real, and even small mistakes like clicking an unknown link or entering a PIN without thinking can lead to financial loss.
This task made me realize the importance of being alert and informed while using digital platforms. One habit I will definitely change is being more careful before clicking on any link or approving any payment request. Earlier, I didn't pay much attention to such details, but now I understand the risks involved.
Overall, this task increased my awareness about online safety and responsible digital behavior. It helped me understand that staying cautious and informed is the best way to protect myself from cyber threats.

CONCLUSION

This Digital Literacy Project helped me develop essential skills required in today's digital world. Through various tasks, I learned how to use tools effectively, create visual content, build a professional online presence, and communicate in a formal manner. I also gained practical experience in coding platforms and understood the importance of online safety and cyber awareness. The project improved my creativity, problem-solving ability, and confidence in using digital platforms. Overall, it provided me with valuable knowledge and skills that will support my academic growth and help me prepare for future professional

opportunities and enhance my understanding of responsible technology usage.
